PDF | shpf is a public domain Subset High Performance Fortran compilation system. This paper gives a brief overview of its structure, the language it supports, and the optimisations that are currently implemented and planned. It also contains details of how to obtain shpf and a... High Performance Fortran (HPF) is an extension of Fortran 90 for parallel programming. In HPF programs, parallelism is represented as data parallel operations in a single thread of execution. HPF extensions included statements to specify data distribution, data alignment, and processor topology, which were used for the translation of HPF codes onto an SPMD message-passing form.
