The bibliographical listings in this publication are documentation products associated with the solar thermal power system project carried out by the Jet Propulsion Laboratory from 1976 to 1983. Documents listed are categorized as conference and journal papers, JPL external reports, JPL internal reports, or contractor reports. Alphabetical listings by title were used in the bibliography itself to [Show full abstract] facilitate location of the document by subject. This annotated Z bibliography contains a selected list of some pertinent publications for Z users. Most of those included are readily available, either as books or in journals. A few unpublished items have been included, where they are particularly relevant and can be obtained reasonably easily. A bibliography, sometime incorrectly referred to as a Works Cited list, is a compilation of every source that was utilized (whether referenced in the paper or not) while researching material for a paper. Typically, a bibliography will include:

- The complete name of the author.
- If the city or town is not well known, or if there is a chance that the name of the city or town may create confusion, add the abbreviated letters for State, Province, or Territory after it for clarification. See Chapter 13.
- For a detailed discussion on citing articles and other publications in periodicals, please see Chapter 5.7 in *MLA Handbook for Writers of Research Papers*. The bibliography is paramount when determining the overall quality and authenticity of a thesis.
