SHORT BIO SKETCH

Jannick Rolland joined the University of Rochester in 2009 and was established as the Brian J. Thompson Professor of Optical Engineering in spring 2009. She serves as director (2013-present) of the NSF I/UCRC Center for Freeform Optics, and director (2012-present) of the R.E. Hopkins Center for Optical Design and Engineering. She holds joint appointments in the department of Biomedical Engineering as well as in the Center for Visual Science. Professor Rolland also serves as an invited Professor at the Institute of Optics in Paris, France where she is helping with the development of a satellite optics institute in Bordeaux with a focus area on Optics and Numeric (2011-present). Rolland served as Faculty member at the University of Central Florida (UCF) where she served as Assistant Professor from (1996-2001), Associate Professor (2001-2008), and full Professor (2008).

Jannick Rolland received a Diplome Grandes Ecole equivalent to a Master Degree from l'*Institut d'Optique – Graduate School* in France in 1984. As part of her French Graduate School program, she worked at REOSC Corporation in France (a leading lens design, fabrication, and testing corporation for large mirror telescopes – now known as SAGEM-REOSC) and designed the optics for SPOT4 (Satellite

for Observation of the Earth working in the Visible-IR region of the spectrum). Following the completion of her Master degree, while visiting the University of Arizona for an abroad experience, she was invited to join the PhD program in 1985. Prior to joining the PhD program at the Optical Sciences Center, she taught a laboratory course for Roland Shack, worked one semester in the optical fabrication shop with Robert Parks, conducted research in optical testing during two semesters with Chris Koliopoulos, and worked two semesters for Robert Shannon on a lens design project related to optical tracking for “Star Wars”. During the summers 1985 and 1986 she had an opportunity to work at Perkin-Elmer in the optical design groups in CT (under the leadership of late Raul Casas) and in CA (under the leadership of late Juan Rayces), respectively. She joined Harry Barrett’s research group in the fall of 2007 to pursue research in medical imaging and received her Ph.D. in Optical Science from the University of Arizona in May 1990.

From there Dr. Rolland joined the Department of Computer Science at the University of North Carolina at Chapel Hill (UNC-CH) as a Postdoctoral Fellow to conduct research in optical design for 3D medical visualization. She was appointed to the Research Faculty at UNC in 1992 and invited to lead the Vision Research Group, which she led from 1992 to 1996. In this period, she supervised a small team of four people working on human perception. In this role, responsibilities have included system engineering, such as the design of head-worn displays for investigating perception issues, design of psychophysical experiments, and computer graphics C++ programming. In 1996, she accepted an invitation to join the CREOL faculty where she formed the Optical Diagnostics and Applications Laboratory (ODALab) and has gone on to become the first women Full Professor at CREOL.

Professor Rolland holds 25 patents, has written 12 book chapters, and has over 120 peer reviewed publications related to optical design with a focus on head-worn displays, vision, augmented reality and 3D visualization, biophotonics technology innovation and development related to Optical Coherence Tomography, and image quality assessment for medical and biomedical imaging. She has authored and co-authored over 200 other publications related to the same topics. She has been on the Editorial Board of Presence (MIT Press) 1996-2006, and was Associated Editor of Optical Engineering 1999-2004. She was a Guest Editor of the Journal of Display Technology for a 2007 special issue on Medical Displays. She was on the Editorial Board of the Handbook for Visual Display Technology published in 2012. She is a Fellow of the Optical Society of America (OSA), a Fellow of SPIE, a senior member of IEEE, and a member of SID. She was a member of ARVO 1994-1997 & 2013-present.

Professor Rolland’s experience has been concentrated in three areas, Conception and Design of Optical Systems, Biophotonics - Optical Coherence Microscopy Imaging combined with Image Quality Assessment, and Physics-based Modeling of Medical Datasets combined with 3D Visualization and Perception Assessment. Most recently, she has been leading a team of graduate and post-graduate students in the fields of Optics, Physics, and Computer Science. She has full responsibility for all aspects of the research activities at the ODALab including strategic directions, securing intellectual property, theoretical developments and reduction to practice, technical oversight, and technology transfer. In addition, she initiated and continues to participate in securing commercial and government funding for advancing the state of the art in her areas of research. Here she has either led or been a main contributor on proposals that were awarded to the ODALab for \$700K/year (on average) in government funding from NSF, NIH, ONR, US ARMY, NASA, DARPA, and Industry. She was an Awardee of the NYSTAR Foundation (2009-2012) that funded her research in Biophotonics. Several of her students have been supported under various Industry Fellowships.

Professor Rolland served on the Board of Directors at Large of the Optical Society of America (2011-2013) and developed in 2011 a new type of OSA meetings called incubator meetings. The first incubator meeting on Freeform Optics led to the creation of the NSF I/UCRC Center on Freeform Optics that she established with a team of collaborators at the university and is directing (CenterFreeformOptics.org).
