# Contents

## Preface vii

1. **Introduction: Still More Questions than Answers** 3  
*William Jagust and Mark D'Esposito*
2. **Methodological and Conceptual Issues in the Study of the Aging Brain** 11  
*Mark D'Esposito, William Jagust, and Adam Gazzaley*
3. **Neuropathology of Aging** 27  
*Dara L. Dickstein, John H. Morrison, and Patrick R. Hof*

## PART I BASIC SCIENCE

4. **A Systems Approach to the Aging Brain: Neuroanatomic Changes, Their Modifiers, and Cognitive Correlates** 43  
*Naftali Raz and Kristen M. Kennedy*
5. **Dopaminergic Modulation of Cognition in Human Aging** 71  
*Shu-Chen Li, Ulman Lindenberger, Lars Nyberg, Hauke R. Heekeren, and Lars Bäckman*
6. **Cognitive Reserve and Aging** 93  
*Yaakov Stern*
7. **Compensatory Reorganization of Brain Networks in Older Adults** 105  
*Cheryl L. Grady*
8. **Cross-Species Imaging Applied to the Aging Brain: Dissociating Alzheimer's Disease from Normal Aging** 115  
*Sidonie T. Jones and Scott A. Small*
9. **Genetics and Imaging in Alzheimer's Disease** 123  
*Susan Y. Bookheimer*
10. **Imaging Cognitive Decline in Aging: Predicting Decline with Structural Imaging** 135  
*Jeffrey Kaye*
11. **The Early Detection of Alzheimer's Disease with Positron Emission Tomography** 151  
*Rachel Mistur, Lisa Mosconi, Remigiusz Switalski, Susan De Santi, Yi Li, Lidia Glodzik, Miroslaw Brys, Wai Tsui, Henry Rusinek, and Mony J. de Leon*
12. **Structural Imaging of Mild Cognitive Impairment** 169  
*Clifford R. Jack, Jr.*
13. **Functional Imaging with FDG-PET in Mild Cognitive Impairment** 183  
*Karl Herholz*
14. **Amyloid Imaging and (What is "Normal?") Aging** 191  
*William E. Klunk and Chester A. Mathis*
15. **Differential Diagnosis of Dementia Using Functional Neuroimaging** 245  
*Eric Salmon, Fabienne Collette, and Gaëtan Garraux*
16. **MRI and the Differential Diagnosis of Dementia** 261  
*António J. Bastos-Leite and Philip Scheltens*
17. **White Matter Hyperintensities in Aging and Dementia** 273  
*Adriane Mayda, Mitsuhiro Yoshita, and Charles DeCarli*
18. **Functional MRI Studies in Aging and Early Alzheimer's Disease: Predicting Clinical Decline** 293  
*Reisa Sperling*
19. **MRI as a Surrogate Marker in Clinical Trials in Alzheimer's Disease** 305  
*Frank Jessen and Harald Hampel*
20. **Brain Imaging in the Evaluation of Putative Alzheimer's Disease-Slowing, Risk-Reducing and Prevention Therapies** 319  
*Eric M. Reiman and Jessica B. S. Langbaum*
21. **Databasing the Aging Brain** 351  
*John Darrell Van Horn and Arthur W. Toga*

**Index** 361

10. Brain Aging and Its Modifiers: Insights from in Vivo Neuromorphometry and Susceptibility Weighted Imaging: Naftali Raz, Karen M. Rodrigue, and E. Mark Haacke. 11. Linking Brain Imaging and Genomics in the Study of Alzheimer's Disease and Aging: Eric M. Reiman. 15. [123I]5-IA-85380 SPECT Imaging of  $^{125}$ I-Nicotinic Acetylcholine Receptor Availability in the Aging Human Brain: Effie M. Mitsis, Kelly P. Cosgrove, Julie K. Staley, Erin B. Frohlich, Frederic Bois, Gilles D. Tamagnan, Kristina M. Estok, John P. Seibyl, and Christopher H. Van Dyck. 16. Role of Aerobic Fitness and Aging on Cerebral White Matter Integrity: Bonita L. Marks, David J. Madden, Barbara Bucur, James M. Provenzale, Leonard E. White, Roberto Cabeza, and Scott A. Huettel. Topics covered include technical factors in brain imaging, pathological basis of age-related structural and functional changes, neurochemistry and genetics of brain imaging in aging, and the use of imaging techniques in diagnosis, longitudinal testing, drug development and testing, and presymptomatic detection. The book is intended to be both a detailed review of the current status of brain imaging and aging and to serve as an introduction to the field for those who may be starting investigations using imaging techniques of PET, structural MRI, and functional MRI. It covers basic science approaches Combining new brain imaging techniques with biochemical analysis, animal studies, and molecular biology, researchers are starting to unravel the intricate interactions that make the brain work, and the complex chains of events that can make it fail. On May 16-17, 2006, some of the world's top neuroscientists gathered at New York University for a conference titled Imaging & the Aging Brain, which was cosponsored by the New York Academy of Sciences and the American Federation for Aging Research. The presentations focused on the recent technological revolution in brain imaging, which is transforming the way researchers understand normal and pathological aging processes.
