Most or all of the grading code may incidentally work on other systems such as MacOS or Windows, and students may optionally choose to do most of their development in one of these alternative environments. However, no technical support will be provided for issues that only arise on an alternative environment. Moreover, no matter what environment is used during development, students must confirm that their code (specifically, the original grader.py script operating on the student's submission.py) runs on a GNU/Linux server, such as cardinal.stanford.edu. The submitted code will not be grad Viral Nagori, Techno-innovative solution in the form of neural expert system to address the problem of high attrition rate, Proceedings of the International Conference on Advances in Information Communication Technology & Computing, p.1-4, August 12-13, 2016, Bikaner, India.Â Martha A.
